

April 2023. US Sport Planes will be at Aero Friedrichshafen in Friedrichshafen, Germany. Scott Severen, owner of US Sport Planes, will be at Aero working with Light Aircraft Manufacturer's Assn, as he serves on their Board of Directors.

This is the leading aviation event in Europe, their Oshkosh, if you will. A bit different, with most of the show indoors, in 7 or 8 giant halls. Inside the halls are exhibits by Piston GA Aircraft, Ultralight/Microlight Aircraft which is the EU term for Light Sport, Business Aviation, Drones, Helicopter, Gyrocopter, E flight and many conferences and seminars.

AERO Show Director Tobias Bretzel says: "Ultralight aircraft have been a very important part of AERO from the very beginning. This has not changed. No other industry

segment exhibits such a high succession of innovations and such dynamism. The performance of modern ultralight aircraft does not need to hide behind that of comparable powered aircraft. Together with the international trade audience, we are looking forward to the innovations and advances in developments that the manufacturers will present in Friedrichshafen."

The fact that the ultralight/microlight industry is a heavyweight within General Aviation in Europe is proven not least by the fact that it occupies four halls at AERO. For more information on aero, see the link: <https://www.aero-expo.com>
